MEETING REPORT WEEK 3

Team Name: Group 1 SWE

Date of Meeting: 27/03/2025

Start Time: 16:15

End Time: 16:30

Meeting Location: Metro Classes

Moderator: Xhesjano Halla

Other Members Present: Anjeza Xhelilaj
Ema Elezi
Laura Dule

Members Absent: None

Topics Discussed:

In this meeting, we mainly shared updates and discussed some of the new things we had learned, especially related to .NET technology. Xhesjano gave us a quick overview of how the backend development is progressing, what has been done so far, and what the next steps will be. We also spent some time talking about the project prototype. We focused on how the "Add Building/Class" feature under the Check Stock section should work and what the user interface would look like. Another point of discussion was how new users should be added to the system. We debated whether to include a "New Member? Register Here" option on the login page or if all new users should be added by Finance (admin) through the Manage Users in the menu bar, where they would also be assigned a role.

Finishing the design for the Finance role is the most important part in prototyping, as it will serve as the foundation for the other user roles, which will have a similar look with a few minor changes. Additionally, Xhesjano shared some helpful tips for improving the structure and content of the documentation, based on his experience working on a similar project during his Bachelor's degree.

Decisions Made:

- We made the decision to include a checkbox next to each school building and class in the user interface, along with a mini side menu offering options such as **New**, **Edit**, and **Delete** to manage them more easily
- We also decided that new users will be registered through the **Manage Users** section in the **Finance (Admin)** dashboard, where the admin can simply click the **"Add New User"** option available in a side mini menu and assign them their respective roles
- The best guidance for completing the project documentation is to use the knowledge that our professor shares with us and the lecture slides. They provide us with the workflow we should follow. A good source of information can also be YouTube videos.

Tasks Assigned:

- Keep working on the documentation, including diagrams
- Finish the authentication and authorization of user roles using .NET
- Anjeza to finish the Finance version of prototype. How the system will look and work
- Continuing building the database and draw the new diagrams we learned during the recent lessons

Time, Place, and Agenda for Next Meeting:
Date: At 07/04/2025
Time: 17:50 – 18:00
Place: Metro Classes
